AIRPRO® MOBILE MIRRORING TO A SCREEN

Screen mirroring is the ability to display AirPro Mobile software on a larger screen such as a projector, TV or computer. It is a great way to provide live product demonstrations in front of an audience or as part of a product webinar.

There are many different screen mirroring programs available which allow the content of a mobile device (smart phone or tablet) to be displayed on a TV or PC. The screen mirroring programs are available for free or via subscription. The free programs generally will use a USB cable and the subscription based programs may allow for wireless connectivity and recording.

TSI has used a free program called Mobizen to mirror the AirPro Mobile app to a PC using a USB cable, which was then connected via an HDMI cable to an overhead projector to support live demonstrations. Mobizen requires a program download to a PC and an app installation on the smart device. Mobizen can support Android devices or iOS with AirPlay.
