

Combustion Analyzers

Model CGA-801
Carbon Monoxide Analyzer

Combustion Gas Analyzers

Models CGA Series 810

Rugged, reliable Alnor Combustion Gas Analyzer kits are available for oil, gas, and bio-fuel systems. They supply real-time data for tuning and preventive maintenance monitoring of burners on furnaces, boilers and other heating appliances. Factory-calibrated sensors provide easy field replacement in just minutes. No need to return to the factory for routine service.

Features and Benefits

- Replacement sensors need no calibration gas
- Automatic O₂, baseline and auto zeroing of sensors
- 12- to 24-hour battery life
- Sensors easily recalibrated in the field
- Sample averages calculated automatically
- Models are available to measure O₂, CO, NO, NO_x, CO₂, efficiency, draft pressure, differential pressure and temperature (stack and ambient)
